EXPERIMENT - 9

ROLL.NO: 240701506 **NAME:SHREYA K S**

Design input forms that validate data (e.g., email, phone number) and display error messages using HTML/CSS, JavaScript (with Validator.js)

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js.

PROCEDURE:

Step 1: Setting Up the HTML Form

Start by creating an HTML form with input fields for the email and phone number.

HTML:

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">

<meta name="viewport" content="width=device-width, initial-scale=1.0">

<title>Form Validation</title>

<link rel="stylesheet" href="style.css">

</head>
<body>
        <div class="container">
           <form id="myForm">
             <label for="email">Email:</label>
             <input type="email" id="email" name="email" required>
              <span id="emailError" class="error"></span>
```

```
<label for="phone">Phone Number:</label>

<input type="text" id="phone" name="phone" required>

<span id="phoneError" class="error"></span>

        <button type="submit">Submit</button>
      </form>
  </div>
<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.6.0/validator.min.js"></script>
        <script src="script.js"></script>
</body>
</html>
```

Step 2: Styling the Form with CSS

Next, add some basic styling to make the form look nice.

css

```
/*style.css */
body {
    font-family: Arial, sans-serif;
    background-color: #f4f4f4;
    display: flex;
    justify-content: center;
    align-items: center;
    height: 100vh;
    margin: 0;
}
/*
.container {
   background-color: white;
   padding: 20px;
   border-radius: 5px;
   box-shadow: 0 0 10px rgba(0, 0, 0, 0.1);
}
```

```
form {
    display: flex;
    flex-direction: column;
}

label {
   margin-bottom: 5px;
}

input {
   margin-bottom: 10px;
   padding: 10px;
   border: 1px solid #ccc;
   border-radius: 3px;
}

button {
    padding: 10px;
    background-color: #28a745;
    color: white;
    border: none;
    border-radius: 3px;
    cursor: pointer;
}

button:hover {
     background-color: #218838;
}

.error {
     color: red;
     font-size: 0.875em;
}
```

Step 3: Adding JavaScript for Validation

Finally, add JavaScript to validate the input fields using Validator.js and display error messages.

javascript

```
script.js */
document.getElementById('myForm').addEventListener('submit', function (e) {
    e.preventDefault();

let email = document.getElementById('email').value;

let phone = document.getElementById('phone').value;

let emailError = document.getElementById('emailError');

let phoneError = document.getElementById('phoneError');

// Clear previous error messages
emailError.textContent = '';
/*
phoneError.textContent = '';
// Validate email
if (!validator.isEmail(email)) {
emailError.textContent = 'Please enter a valid email address.';
}
// Validate phone number
if (!validator.isMobilePhone(phone, 'any')) {
phoneError.textContent = 'Please enter a valid phone number.';
}
// If no errors, submit the form (for demonstration purposes, we'll just log the values)
if (validator.isEmail(email) && validator.isMobilePhone(phone, 'any')) {
console.log('Email:', email);
console.log('Phone:', phone);
}
});
```

Output:

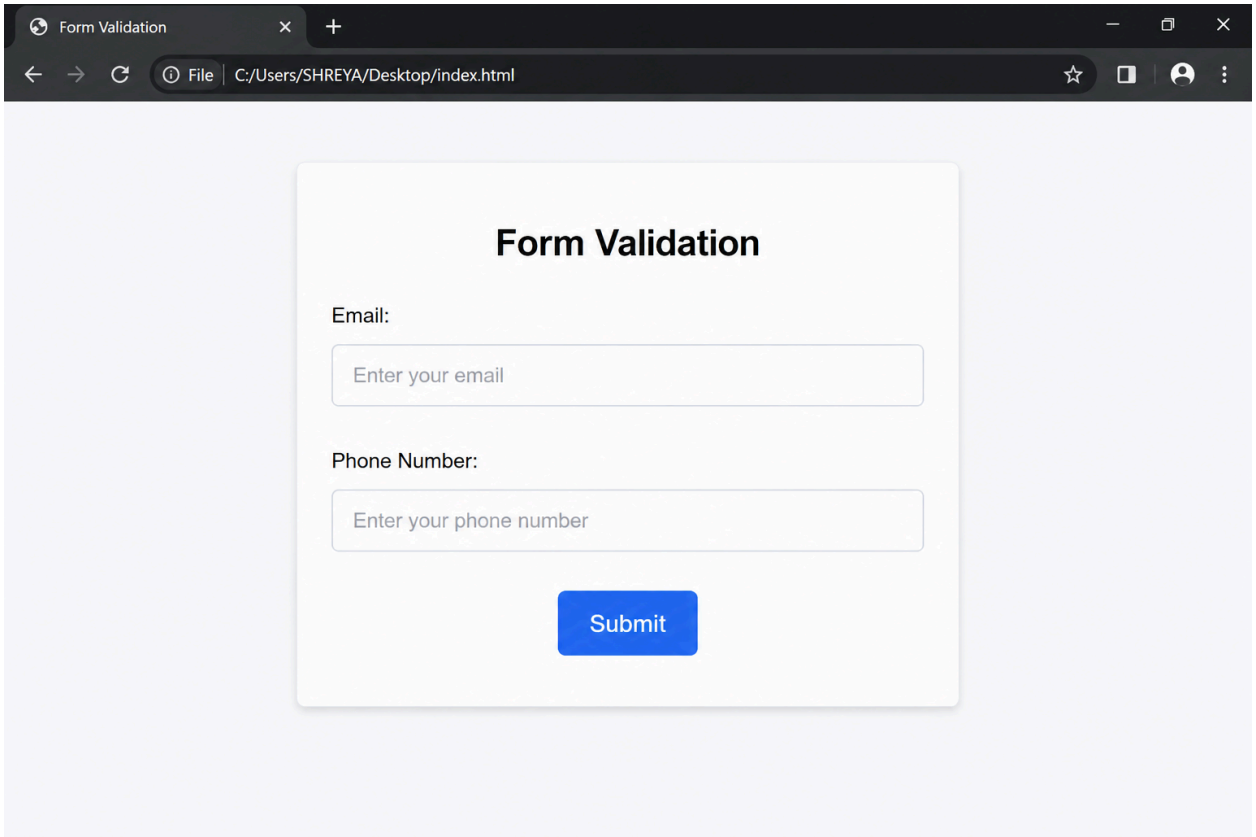

Figure 1: Initial Form (Before User Input)

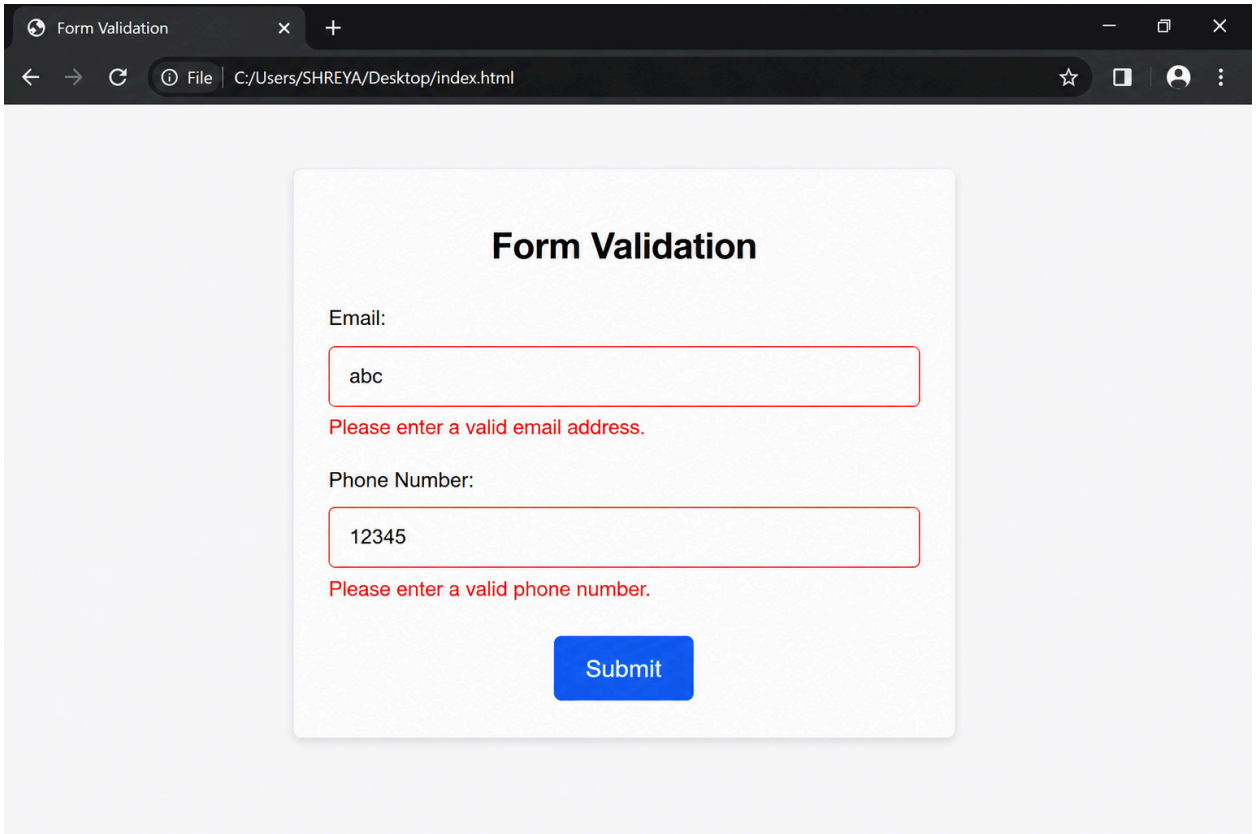

Figure 2: Validation Errors for Invalid Input

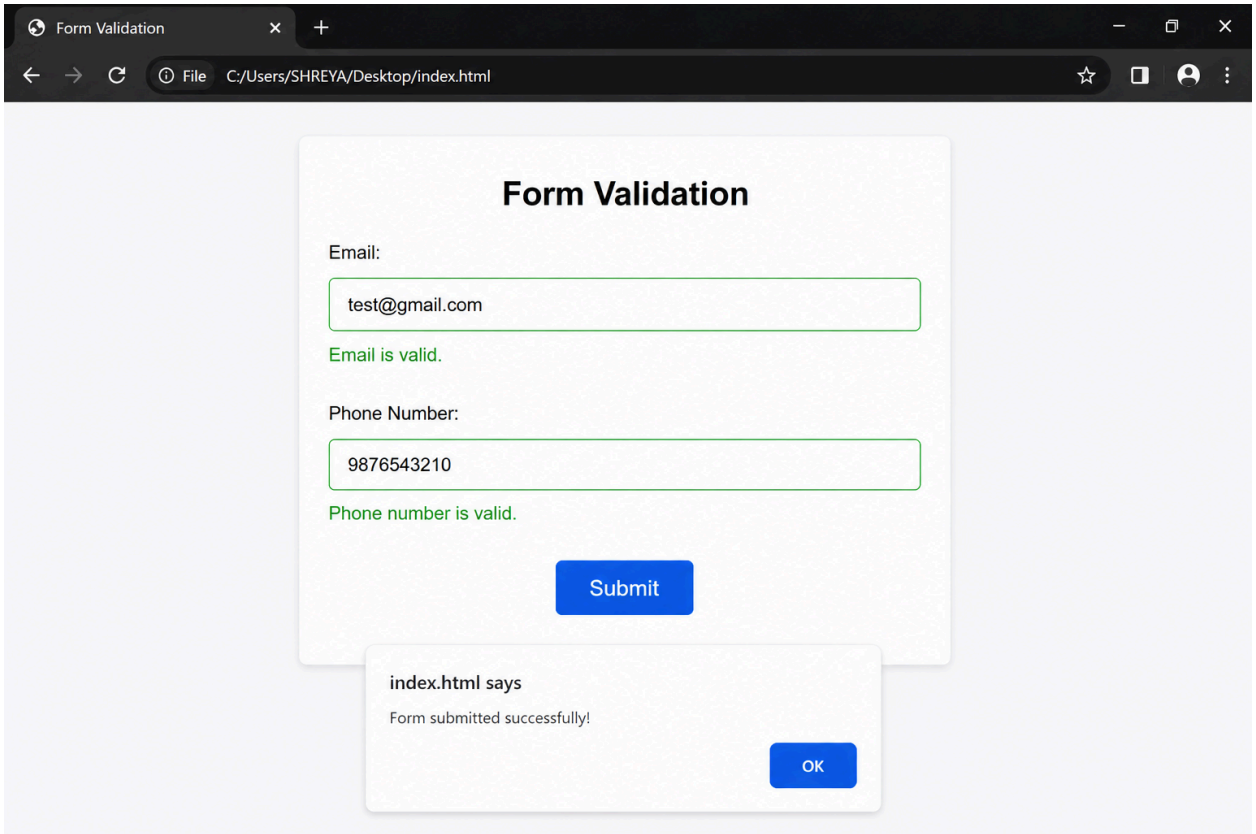

Figure 3: Successful Form Submission

RESULT:

The form validation was successfully implemented using HTML, CSS, and JavaScript. The system correctly validates email and phone inputs and displays appropriate error messages.
