EXPERIMENT - 7

NAME: SHREYA K S **ROLL NO: 240701504**

AIM:

To design different button styles in a mobile application using GIMP and evaluate user feedback on usability and visual appeal.

Introduction :

Buttons are one of the most important elements in user interface design. They guide user actions like login, submit, or navigation. The design of buttons—including color, shape, size, and effects—directly affects usability and user interaction.

In this experiment, different button styles are designed using GIMP while keeping the layout constant. These styles are tested based on user feedback to determine the most effective design for usability and aesthetics.

Procedure :

Step 1: Create New Project

- Open GIMP application
- Go to File → New
- Set canvas size to 1080 × 1920 pixels
- Click OK

Step 2: Design Base Layout

- Created a simple login screen layout
- Used Rectangle Select Tool for:
  - Input fields
  - Button area
- Used Text Tool to add:
  - Title (Login Page)
  - Email & Password labels
  - Button text
- Maintained proper spacing and alignment
- Organized elements into layers

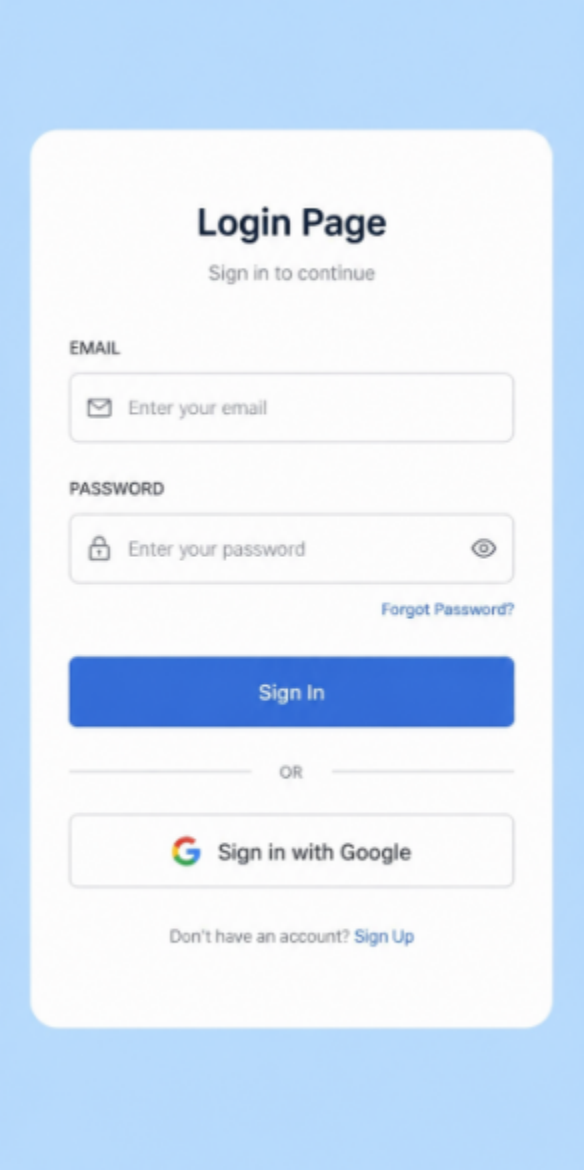
Step 3: Create Button Variations

- Duplicated layout using Image → Duplicate

● Designed three button styles:

Layout 1: Flat Button Style

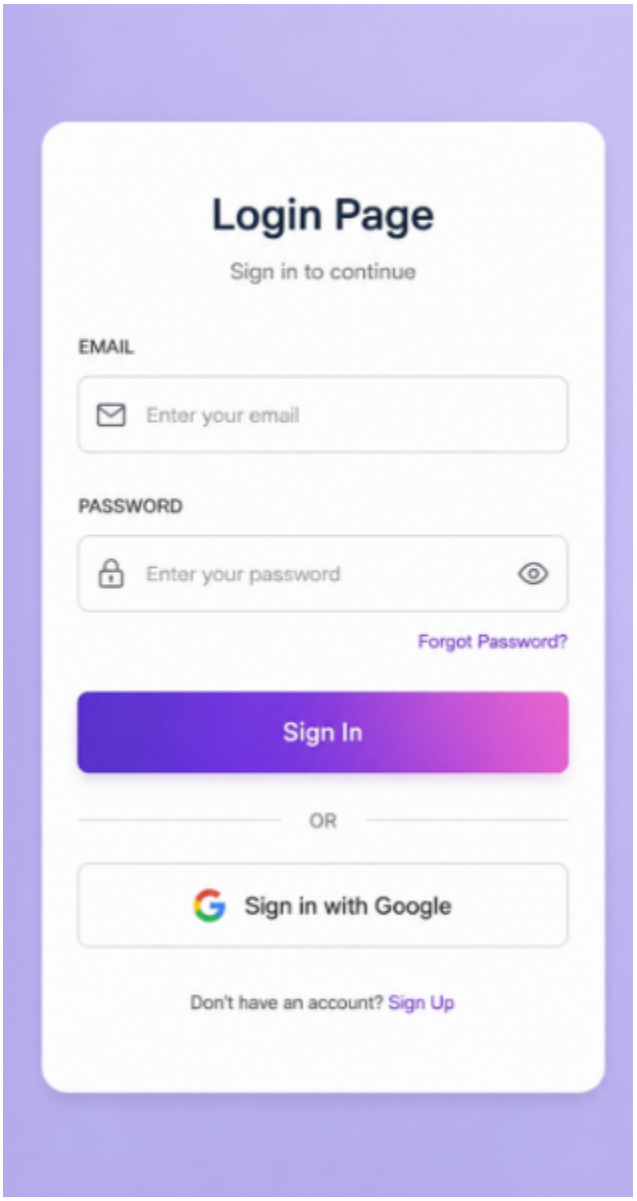
- Simple solid color button
- No shadows or gradients
- Minimal design



Layout 2 (Gradient Button)

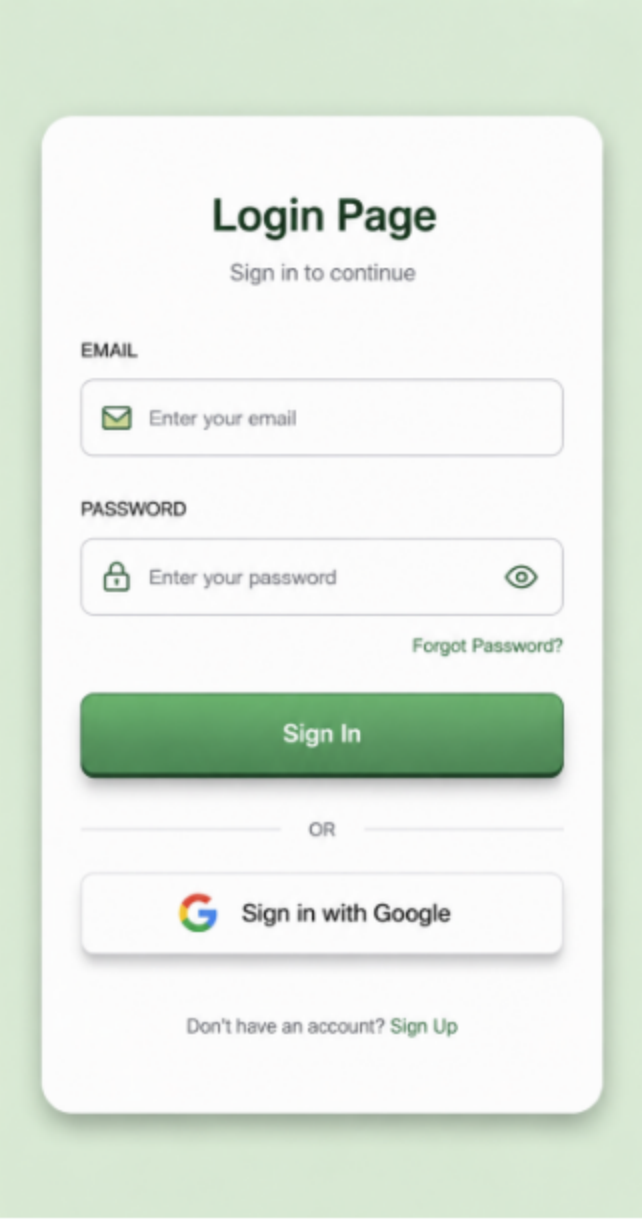
- Modern and visually appealing
- Smooth color effect improves attractiveness

- Good balance between design and usability
- Preferred by many users



Layout 3 (Shadow Button)

- Looks interactive and clickable
- 3D effect attracts user attention
- Slightly heavy design compared to others
- Good for gaming or dynamic apps



Conclusion :

From the user feedback, the Gradient Button Style was found to be the most effective. It provides a modern appearance, good visibility, and better user engagement compared to flat and shadow styles.
